Quality of Reproductions from CORONA 1. As you remember, immediately after Mission 9009, SAC reported dissatisfaction with the density of the reproductions of the "C" missions. This was resolved by a series of printing level samples made by and shipped to SAC for their review Also as you remember, this resulted in no change in printing requirements. 2 Recently I have had rumors of dissatisfaction by many of the users—SAC, ACIC, AFCIN, and NPIC. All complaints seem to indicate that they are dissatisfied with density, that is, density seems to be too high. It seems some complain because of the problems faced in rectification and others when they attempt to use the material in their 20X enlargers. 3. Request you review this problem with the COMOR to either confirm or deny such rumors. If dissatisfaction does exist, it is requested each customer make known his requirements so that we can give them the service they require.
